SUMMARY

Full-Stack Developer and Computer Science student with hands-on experience engineering 4+ production-grade web and mobile applications across the full development lifecycle. Proficient in React, Next.js, Node.js (Express), Django, and PHP for scalable frontend and backend development, alongside RESTful API design, PostgreSQL and MySQL database architecture, JWT/OAuth 2.0 authentication, and role-based access control (RBAC). Experienced with cloud deployment on AWS and Vercel, containerization using Docker, and version control with Git. Seeking a Software Engineering Internship to build secure, high-performance full-stack solutions within an agile, collaborative team environment.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Python, Java, PHP, C, HTML5, CSS3

Frontend: React.js, Next.js, React Native, Tailwind CSS, Bootstrap, Material UI, Redux Toolkit

Backend: Node.js, Express.js, Django, Django REST Framework, Laravel (PHP), WebSockets

Databases: PostgreSQL, MySQL, MongoDB, Firebase Firestore, Prisma ORM, Django ORM

Cloud & DevOps: AWS, Docker, Git, GitHub, Vercel, CI/CD Pipelines

APIs & Security: RESTful APIs, JWT, OAuth 2.0, Firebase Authentication, CORS, Stripe Payment Gateway

Tools & Libraries: Postman, Figma, Nodemailer, OpenAI API, Prisma ORM

PROJECTS

Project Management Platform | [Live Demo](#)

Mar 2026 – Apr 2026

Full-Stack Developer | React, Node.js, Express, PostgreSQL, Prisma ORM, Tailwind CSS, Redux Toolkit

- Engineered a workspace-based team collaboration platform with React frontend and Node.js REST API backend supporting multi-user project tracking
- Designed a normalized PostgreSQL schema using Prisma ORM to manage hierarchical relationships between workspaces, projects, tasks, and members
- Implemented secure multi-role authentication with workspace-level RBAC and session management via Clerk (OAuth 2.0 / JWT)
- Architected real-time event-driven data synchronization using Inngest and Clerk Webhooks for consistent cross-service state management
- Developed an interactive analytics dashboard using Recharts and Redux Toolkit to visualize project progress and team productivity KPIs
- Integrated automated notification workflows with scheduled task reminders and email alerts via Nodemailer and Inngest

Splitify – Cross-Platform Expense Splitting App | [Live Demo](#)

Nov 2025 – Jan 2026

Full-Stack Mobile Developer | React Native, Expo, Firebase Cloud Firestore, TypeScript

- Developed a cross-platform iOS/Android mobile application for real-time group expense splitting, debt tracking, and settlement management
- Engineered a custom greedy debt-simplification algorithm to minimize total transaction count across multi-user group settlements
- Implemented a secure dual-party settlement confirmation system requiring mutual user consent to enforce transaction integrity
- Architected a scalable real-time NoSQL backend using Firebase Cloud Firestore to manage complex relational data between users, groups, and expenses
- Integrated Firebase Authentication with role-based access control (RBAC) and invite-based onboarding for secure user management

EventHub – Event Registration & Management System | [Live Demo](#)

Jan 2026 – Jan 2026

Full-Stack Developer | React 19, Django, Django REST Framework, MySQL, Tailwind CSS, JWT

- Developed a modular, multi-role event management platform (Admin, Organizer, Attendee) using React 19 frontend and Django REST Framework API

- Implemented JWT-based authentication with RBAC, protected routing, and token refresh mechanism for secure session lifecycle management
- Designed a normalized MySQL schema using Django ORM to manage relational data across events, tiered tickets, users, and registrations
- Built a dynamic ticketing engine supporting VIP/General tiers with real-time seat availability tracking and automated PDF ticket generation via jsPDF
- Enforced application security using CORS protection, bcrypt password hashing, and strict server-side input validation

GearSphere – E-Commerce & PC Builder Platform | [Live Demo](#)

Jun 2025 – Oct 2025

Full-Stack Web Developer | React, PHP OOP, MySQL, Material UI, Chart.js, Vite

- Developed a full-stack e-commerce and interactive PC-building platform using React frontend and a PHP OOP REST API backend
- Engineered a budget-based PC component recommendation algorithm to suggest performance-optimized, cost-compatible hardware configurations
- Implemented a secure multi-role authentication system with session management and OTP email verification via PHPMailer
- Designed a normalized MySQL database schema to manage relational data across users, components, orders, and service workflows
- Built an admin analytics dashboard using Chart.js and Material UI to visualize real-time sales, user activity, and technician service metrics

EDUCATION

Uva Wellassa University <i>BSc (Hons.) in Computer Science and Technology CGPA: 3.5 / 4.0</i>	Badulla, Sri Lanka 2023 – Present
J/Velanai Central College <i>GCE Advanced Level – Physical Science Stream (Mathematics) Combined Maths: A, Physics: C, Chemistry: C</i>	Jaffna, Sri Lanka Completed 2022

CERTIFICATIONS

- UVAXTREME 1.0 Hackathon – Participant, Uva Wellassa University (2024)
